

Presorted Standard Stamp Update

There has been a recent change in presorted standard stamps released April 14th, 2022. This changed the orientation of stamps from portrait to landscape which will impact your Postmatic Stamp Affixer. You will need to make adjustments on your stamp affixer to accommodate this recent change.

Old Stamps - Portrait
dimensions: .98" x .87"

New Stamps - Landscape
dimensions: .87" x .98"

Instructions:

To accommodate for the new stamp dimensions, you will need to adjust the fiber optics upwards to reduce the amount of advancement of the stamp at the peel bar (see images below to locate fiber optics). Link to YouTube Video on how to adjust fiber optics: <https://youtu.be/X1MektyEWho>.

In some cases, you may need to switch your blocks holding the fiber optics. These blocks are currently positioned to tip the brass bars downwards at a 5-degree angle shown in pictures below. You may need to switch them to point to brass bars upwards which will change the advancement of the stamps to accommodate the change.
